FROM: James J. Jones *JJ* DLPC, Peoria

SUBJECT: John Deere Harvester Works  
LPC #1618100015

This facility manufactures, machines, assembles and paints grain harvesting equipment. The facility submitted its Part A as a generator/storer in November 1980 to the USEPA and subsequently, has withdrawn their Part A in January 1985 to become only a generator of hazardous waste with storage less than 90 days.

John Deere Harvester Works currently generates waste paint and solvent mixture for solvent reclaim, waste mineral spirit solvent for reclaim and caustic paint stripper, which is manifested to their John Deere Component Works in Waterloo, Iowa for reclaim.

This facility was inspected on Wednesday, September 4, 1985 using the standards applicable to generators of hazardous waste. A review of the manifest and record keeping procedures was conducted and appeared to meet the requirements of Subparts B and D respectively. In the area of pre-transport requirements, 12 drums of paint and solvent waste did not have accumulation dates clearly marked on the containers. In addition, their contingency plan was inadequate in the areas of Section 725.152 (c,d, and f) and will be addressed along with the apparent pre-transport requirement violations in a CIL.
